LUMEN SETS NEW STANDARDS WITH THE LAUNCH OF THE EVO ROOFLIGHT

One of the UK's leading providers of high quality rooflights, Lumen, has launched its stunning new range, the Lumen Evo in response to strong demand for a high quality product with a cutting-edge contemporary design

Designed with builders, architects, developers and specifiers in mind, Lumen Evo is a breakthrough in rooflight technology. Its industry leading design complements modern architecture and offers homeowners a completely new standard in design quality and performance.

Equally suited to refurbishment projects or complete new builds, the Lumen Evo exceeds all requirements and is constructed using the highest quality materials, including twin American oak interior liners, a high spec of glazing, gas strut assisted opening, trickle vent, unique security locking system and locking handle.

The new units are manufactured from mild steel and protected with a PZ770 polyester powder coat to provide a long low-maintenance life. As with the entire Lumen range of rooflights, Evo offers a high specification of Pilkington glazing with Activ Neutral self-cleaning, argon gas filled cavity and Pilkington Optitherm S3 as standard (other glazing options are available if required). The units also offer first rate thermal performance, with a glazing u-value of only 1.1W/mK.

The Evo also boasts a unique locking system, which ensures additional security and compliance with BS6375: Part 1: 2009 for weather performance.

The design includes a lockable vent, which provides background ventilation when the rooflight is closed. The top hung design is supplied with a functional handle and operation of the casement is assisted by gas struts which are neatly concealed within the framework to ensure the clear viewable size is not significantly reduced.

With no complicated kits to assemble, Evo rooflights are delivered onsite ready for simple installation for the roofing contractor.

Commenting on the new Evo, Lumen Managing Director, Paul Trace, said: “Lumen has a deserved reputation for providing high quality products and for being one of the leading suppliers of conservation style rooflights.

“The Lumen Evo offers a stylish and streamlined roof window for customers who are seeking a more modern look for their roof glazing. The design is low profile and unobtrusive, while offering a high specification of energy efficiency and self-clean glazing. No other product on the market can match the Evo for design quality and specification and we believe we have set the bar very high with this fantastic product.”

Manufactured entirely in Great Britain, the Lumen range offers something for architects, contractors and clients alike, whether your requirements are led by design practicality, ease of installation, maintenance or safety.

For further information on the Lumen Evo, or other rooflights in the Lumen range, please contact Lumen on 0330 300 1090, email info@lumenrooflight.co.uk, or visit www.lumenrooflight.co.uk
